

DERMOPHENAZOL®
(*Antazoline sulphate + naphazoline nitrate*)

Packaging

30-ml bottle
OTC product
Solution for spraying on the skin
(5 mg + 0.25 mg)/ml

Properties and Action

Antazoline inhibits allergic symptoms, especially those associated with histamine release. Naphazoline nitrate causes vasoconstriction, reduces hyperaemia and oedema. The drug eliminates irritation caused by insect bites, particularly when the underlying cause is allergy.

Indications

Skin irritation following stinging or biting by insects: mosquitoes, ants, mites, bees, wasps, and other.

Contraindications

Hypersensitivity to the components of the drug or adrenomimetic agents.

Dosage

Spray the liquid onto the skin at the spot of insect bite every 4 - 6 hours.

Side Effects

No side effects have been observed when the medicine was used locally on the skin.
